

CNY Snow Spotters Net

This is <Call Sign> calling the Central NY Snow Spotter's Net.

This Net is called following any significant snow fall event at 1930 hrs for the purpose of receiving snow measurement reports which are forwarded to the National Weather Service in Binghamton to assist in follow up snowfall modeling of recorded storm activity.

All stations that hear and use this repeater are invited to participate. General snowfall measurements are taken and rounded to the nearest inch. When checking into the net with your report please give your call, location (town/village) and snowfall total. Once again, all are invited to participate; many reports will assist the NWS.

Stations wishing to check in with accumulation reports please call:

This has been a session of the CNY Snow Spotters net.

This net is called at 1930 hrs following any significant snowfall event. All stations hearing and using this repeater are welcome to and encouraged to participate. All measurements are forwarded to the NWS to assist in their follow up of snowfall events.

We thank W2MO and the Madison-Oneida Amateur Radio Club for the use of the repeater.

The net is clear, returning the repeater to other amateur uses. 73 <Call Sign> out.
